### **SEASPACE CORPORATION COMPLETES INSTALLATION OF SYSTEMS AT ARGENTINA'S INSTITUTO NACIONAL DE TECNOLOGIA AGROPECUARIA**

*Poway, California, December 5<sup>th</sup>, 2008*-SeaSpace Corporation successfully installed a 2.4 m X/L-Band and 3.7 m L-Band TeraScan® system for Argentina's Instituto Nacional de Tecnologia Agropecuaria (INTA) in Castelar, Provincia de Buenos Aires, Argentina. This will allow INTA to receive and process MODIS, NOAA, and GOES data. The 2.4m TeraScan® X/L -Band systems utilize a 2.4m reflector mounted on a 3-axis positioner installed inside a 3.2m radome, and utilize high performance tracking antenna systems which provide both program track and autotrack of Low Earth Orbit (LEO) satellites.

Dr. Rebella, the Director of Instituto de Clima y Agua at INTA had this to say about the new system, "It is estimated that the material produced will be very useful for the permanent monitoring of farming and forest activities, by means of the available information of vegetation indices of cultures and pastures, detection of fire centers, etc, as well as for calculating levels of precipitation and tracking of climatic contingencies such as freezes and hail storms.

The system will generate large amounts of data that will be used as a collection of inputs of research activities intended for better understanding and management of the relationship between the environment and the utilization of the natural resources."

About SeaSpace Corporation:

SeaSpace Corporation empowers people to improve the safety, security and enjoyment of our global environment. SeaSpace manufactures TeraScan® hardware and software products that provide customers with timely and accurate satellite-derived weather and environmental information. These systems are in operation at more than 450 customer sites in over 30 countries.
